THE SERIES

The wide range of auxiliary functions available completes the excellent performances offered by the microprocessor-based controllers of the THE series, with standard 48x96 mm format and single and double display versions.

The main PID control action adjusts itself automatically to the optimum parameters with the AT initial autotuning, or with the ADT permanent autoadaptive function; while the auxiliary outputs can be programmed on 16 different alarm functions or fixed points.

The LFA diagnostic function is able to detect failures along the entire regulation loop, from the sensor to the actuator; moreover the regulation can be either automatic (closed loop) or manual (open loop), setting the output percentual value.

The complete programming of the controllers is made through the front panel, with the possibility of including a 3 level software safety lock.
